🧲 Girls' Programming Network

## Today's project!

#### Markov Chains!

#### What is a Markov Chain?

#### A Markov chain is a simple Artificial Intelligence!

Let's play a game with some cups to help explain it

#### Let's play the cups game!

Let's generate some text in the style of Green Eggs & Ham by Dr Seuss

Do you like green eggs and ham?I do not like them, Sam-I-am.I do not like green eggs and ham.

Would you like them here or there?

I would not like them here or there. I would not like them anywhere.

## Let's play the cups game!

- Each cup is labelled with a word from Green Eggs and Ham
- Each cup contains the words that follow the "label" word in Green Eggs and Ham

## Let's play the cups game!

Read the outside of your cup!

**If you hear** someone shout the word on the outside of your cup:

- 1. Pick a piece of paper from inside your cup
- 2. Shout out the word on the piece of paper
- 3. Put the piece of paper back in your cup

## Today we'll be making Markov Chains!

#### Markov chains are exactly what we just did with the cups! Today we'll make the computer do it too to make some crazy stories!!

#### Here's one we made from some Shakespeare!

doth stay! All days when I compare thee to unseeing eyes be blessed made By chance, or eyes can see, For all the top of happy show thee in dark directed. Then thou, whose shadow shadows doth stay! All days when I compare thee in your self in inward worth nor outward fair, Can make bright, How would thy shade Through heavy sleep on the eye of life repair, Which this, Time's pencil, or my pupil pen, Neither in the living day, When in eternal lines of that fair from fair thou grow'st, So should the lines to a summer's day?

#### Imagine if you used one of these to do your homework!!

#### Using the workbook!

#### The workbooks will help you put your project together!

#### Each **<u>Part</u>** of the workbook is made of tasks!

#### Tasks - The parts of your project

Follow the tasks **in order** to make the project!

#### Hints - Helpers for your tasks!

Stuck on a task, we might have given you a hint to help you **figure it out**!

The hints have <u>unrelated</u> examples, or tips. **Don't copy and paste** in the code, you'll end up with something **CRAZY**!

#### Task 6.2: Add a blah to your code!

This has instructions on how to do a part of the project

- 1. Start by doing this part
- 2. Then you can do this part

#### Task 6.1: Make the thing do blah!

Make your project do blah ....

#### Hin

A clue, an example or some extra information to help you **figure out** the answer.

print('This example is not part of the project' )

### Using the workbook!

The workbooks will help you put your project together!

Check off before you move on from a **<u>Part</u>!** Do some bonuses while you wait!

Make sure you can tick off every box in this section before you go to the next Part.

#### **Lecture Markers**

This tells you you'll find out how to do things for this section during the names lecture.

#### **Bonus Activities**

Stuck waiting at a lecture marker? Try a purple bonus. They add extra functionality to your project along the way.

#### CHECKPOINT

#### ★ BONUS 4.3: Do some extra!

Something to try if you have spare time before the next lecture!

## Intro to Programming

Girls' Programming Network

What is programming?

# Programming is not a bunch of crazy numbers!

## It's giving computers a set of instructions!

## A Special Language

# A language to talk to dogs!

Programming is a language to talk to computers

### People are smart! Computers are dumb!

#### SALAD INSTRUCTIONS

Programming is like a recipe!

Computers do EXACTLY what you say, every time.

Which is great if you give them a good recipe!

#### People are smart! Computers are dumb!

#### SALAD INSTRUCTIONS

But if you get it out of order....

A computer wouldn't know this recipe was wrong!

### People are smart! Computers are dumb!

#### SALAD INSTRUCTIONS

Computers are bad at filling in the gaps!

A computer wouldn't know something was missing, it would just freak out!

#### Everyone/thing has strengths!

- Understand instructions despite:
  - Spelling mistakes
  - Typos
  - Confusing parts
- Solve problems
- Tell computers what to do
- Get smarter every day

- Does exactly what you tell it
- Does it the same every time
- Doesn't need to sleep!
- Will work for hours on end!
- Get smarter when you tell them how

## Intro to Python

#### Let's get coding!

### Where do we program?

#### We'll use *Repl It* to make a Python project!

#### Go to replit.com in your web browser

**Girls' Programming Network** 

## Where do we program?

# You need to sign up or sign in to start coding

#### If you have a **Google** or **Apple account** it's easiest to use that.

Or use an **email address** you are able to log into.

#### We can learn from our mistakes!

Inclusion

Write some code!!

This is the first bit of code we will do. What do you think it does?

# print('hello world')

Girls' Programming Network

Write some code!!

This is the first bit of code we will do. What do you think it does?

# print('hello world')

It prints the words "hello world" onto the screen!

We can print things in lots of different ways in python!
>>> print("Hello world!")

>>> print("Hello", "world!")

>>> print("Hello", "world", end="!")

We can print things in lots of different ways in python!
>>> print("Hello world!")
Hello world!
>>> print("Hello", "world!")

>>> print("Hello", "world", end="!")

We can print things in lots of different ways in python!
>>> print("Hello world!")
Hello world!
>>> print("Hello", "world!")
Hello world!
>>> print("Hello", "world", end="!")

We can print things in lots of different ways in python!
>>> print("Hello world!")
Hello world!
>>> print("Hello", "world!")
Hello world!
>>> print("Hello", "world", end="!")
Hello world!

Note that this last one will not have a new line after it!

#### Variables

### Variables are useful for storing things that change

(i.e. things that "vary" - hence the word "variable")

You can think of it like putting information in a box and giving it a name

#### Variables

Instead of writing a name, we can use the name that is inside our variable! Here, we get the name out of the box.

print(name)

#### Variables

Instead of writing a name, we can use the name that is inside our variable! Here, we get the name out of the box.

```
print(name)
```

#### Reusing variables

We can replace values in variables:

```
animal = "dog"
print("My favourite animal is a " + animal)
animal = "cat"
print("My favourite animal is a " + animal)
animal = animal + "dog"
print("My favourite animal is a " + animal)
```

What will this output?

#### **Reusing variables**

We can replace values in variables:

```
animal = "dog"
print("My favourite animal is a " + animal)
animal = "cat"
print("My favourite animal is a " + animal)
animal = animal + "dog"
print("My favourite animal is a " + animal)
```

What will this output? My favourite animal is a dog My favourite animal is a cat My favourite animal is a catdog

#### Asking a question!

It's more fun when we get to interact with the computer!

#### Let's get the computer to ask us a question!

my\_name = input('What is your name? ')
print('Hello ' + my\_name)

What do you think happens?

#### Asking a question!

It's more fun when we get to interact with the computer!

#### Let's get the computer to ask us a question!

my\_name = input('What is your name? ')
print('Hello ' + my\_name)

What do you think happens?

What is your name? Maddie Hello Maddie

#### Asking a question!

#### Coding in a file!

### Part 0 of your workbook is to create a new file. This is a picture of how to do it in IDLE

Python 3.5.1 Sh	ell	-		×
<u>File</u> <u>E</u> dit She <u>l</u>	Debug Options	s <u>W</u> indow <u>H</u> elp		
New File Open Open Module Recent Files Class Browser Path Browser	Ctrl+N Ctrl+O Alt+M Alt+C	)7cee5969, Dec 6 2015, 01:54:25) [MSC v.1900 64 bit (AMD64)] on win32 s" or "license()" for more information.		
Save Save As Save Copy As	Ctrl+S Ctrl+Shift+S Alt+Shift+S		Ln: 5	v Col: 4
Print Window	Ctrl+P			
Close Exit	Alt+F4 Ctrl+Q			

#### Name your file **markov\_chains.py**

Sometimes we want to write things in code that the computer doesn't look at! We use **comments** for that!

Use comments to write a note or explanation of our code Comments make code easier for humans to understand

# This code was written by Sheree

We can make code into a comment if we don't want it to run (but don't want to delete it!)

```
# print("Goodbye world!")
```

# You now know all about printing, variables and input!

### Let's put what we learnt into our project Try to do Part 0 - Part 2

#### The tutors will be around to help!

### If Statements and Lists

Girls' Programming Network

Conditions let us make decision. First we test if the condition is met! Then maybe we'll do the thing

#### Computers store whether a condition is met in the form of True and False

# To figure out if something is True or False we do a comparison

5 < 10 "Dog" == "dog" 3 + 2 == 5 "D" in "Dog" 5 != 5 "Q" not in "Cat"

#### Computers store whether a condition is met in the form of True and False

# To figure out if something is **True** or **False** we do a comparison

5 < 10 True "Dog" == "dog" 3 + 2 == 5 "D" in "Dog" 5 != 5 "Q" not in "Cat"

Girls' Programming Network

#### computers store whether a condition is met in the form of True and False

#### To figure out if something is True or False we do a comparison

"Cat"

5 < 10 True	"Dog" == "dog"
3 + 2 == 5 True	"D" in "Dog"
5 != 5	"Q" not in "Cat'

#### Computers store whether a condition is met in the form of True and False

# To figure out if something is True or False we do a comparison

5 < 10	True	"Dog" == "dog"
3 + 2 == 5	True	"D" in "Dog"
5 != 5	False	"Q" not in "Cat"

#### Computers store whether a condition is met in the form of True and False

# To figure out if something is **True** or **False** we do a comparison

5 < 10	True	"Dog" == "dog"	False
3 + 2 == 5	True	"D" in "Dog"	
5 != 5	False	"Q" not in "Cat"	

#### Computers store whether a condition is met in the form of True and False

# To figure out if something is True or False we do a comparison

5 < 10	True
3 + 2 == 5	True
5 != 5	False

"Dog" == "dog" False

"D" in "Dog" True

"Q" not in "Cat"

#### Computers store whether a condition is met in the form of True and False

# To figure out if something is True or False we do a comparison

5 < 10	True
3 + 2 == 5	True
5 I= 5	False

"Dog" == "dog" False

"D" in "Dog" True

"Q" not in "Cat" True

So to know whether to do something, they find out if it's True!

fave\_num = 5
if fave\_num < 10:
 print("that's a small number")</pre>

#### How about a different number???

fave\_num = 9000
if fave\_num < 10:
 print("that's a small number")</pre>

#### Find out if it's True!

#### How about a different number???

fave\_num = 9000
if fave\_num < 10:
 print("that's a small number")</pre>

<u>What do you think happens?</u> >>>

#### How about a different number???

fave\_num = 9000

if fave\_num < 10:</pre>

print("that's a small number")

Nothing!

Tech

Inclusion

What do you think happens?

>>>

### Actually .....

 $fave_num = 5$ 

if fave\_num < 10: print("that's a small number") print("and I like that")

print("A LOT!!")

... controls anything below it that is indented like this!

This line ...

```
fave_num = 5
if fave_num < 10:
    print("that's a small number")
    print("and I like that")
    print("A LOT!!")</pre>
```

# What do you think happens?

```
fave_num = 5
if fave_num < 10:
    print("that's a small number")
    print("and I like that")
    print("A LOT!!")</pre>
```

>>> that's a small number
>>> and I like that
>>> A LOT!!

```
word = "GPN"
if word == "GPN":
    print("GPN is awesome!")
```

What happens?

```
word = "GPN"
if word == "GPN":
    print("GPN is awesome!")
```

What happens?
>>> GPN is awesome!

#### Lists

When we go shopping, we write down what we want to buy!

But we don't store it on lots of little pieces of paper!

We put it in one big shopping list!

#### Lists

It would be annoying to store it separately when we code too

- >>> shopping\_item1 = "Bread"
- >>> shopping\_item2 = "Chocolate"
- >>> shopping\_item3 = "Ice Cream"
- >>> shopping\_item4 = "Pizza"

So much repetition!

```
Instead we use a python list!
>>> shopping_list = ["Bread", "Chocolate", "Ice Cream",
"Pizza"]
```

#### List anatomy

🥻 Girls' Programming Network

#### You now know all about **if** and lists!

# See if you can do Part 3

The tutors will be around to help!

🧲 Girls' Programming Network

Girls' Programming Network

#### That's so random!

# There's lots of things in life that are up to chance or random!

Python lets us **import** common bits of code people use! We're going to use the **random** module!

We want the computer to be random sometimes!

### Using the random module

Let's choose something randomly from a list!

This is like drawing something out of a hat in a raffle!

Here's an example!

2. Copy the shopping list into IDLE

>>> shopping\_list = ["eggs", "bread", "apples", "milk"]

- 3. Choose randomly! Try it a few times!
  - >>> random.choice(shopping\_list)

### Using the random module

#### You can also assign your random choice to a variable

- >>> import random
- >>> shopping\_list = ["eggs", "bread", "apples", "milk"]
- >>> random\_food = random.choice(shopping\_list)
- >>> print(random\_food)

#### Raaaaaaaaaaadom! Can you handle that?

# Let's try use it in our project! Try to do Part 4

The tutors will be around to help!

For loops allow you to do something a certain number of times.

We use them when we know exactly how many times we want to do something!

number = 10
for i in range(number):
 #Do something

🦩 Girls' Programming Network

Girls' Programming Network

### Looping how many times?

#### We can loop through a list:

```
friends = 4
for i in range(friends):
    print("Hello friend!")
```

What's going to happen?

We do what's in the for loop as many times as what is in the "range"

### Looping how many times?

#### We can loop through a list:

```
friends = 4
for i in range(friends):
    print("Hello friend!")
```

What's going to happen?

```
>>> Hello friend!
```

We do what's in the for loop as many times as what is in the "range"

#### Now you know how to use a for loop!

## Try to do Part 5 ...if you are up for it!

The tutors will be around to help!

## Lists and Dictionaries

Girls' Programming Network

#### **Dictionaries!**

|--|

## You know dictionaries!

They're great at looking up thing by a word, not a position in a list!

## Get back

A greeting (salutation) said when meeting someone or acknowledging someone's arrival or presence.

## Looking it up!

## There are lots of times we want to look something up!

Team Name  $\rightarrow$  List of team members

Name  $\rightarrow$  Phone number

Treat Name  $\rightarrow$  Price

#### Looking it up!

# Phone Book

# Name → Phone number Key

#### We can use a dictionary for anything with a <u>key $\rightarrow$ value</u> pattern!

#### **Dictionaries anatomy!**

#### This is a python dictionary!

This dictionary has Alex, Caitlin and Emma's phone numbers

### Playing with dictionaries!

Let's try using the phone book!

• Let's create the phonebook

```
>>> phone_book = {
    "Alex": 111, "Caitlin": 222, "Emma": 333
}
```

Let's get Alex's number from the phonebook
 >> phone\_book["Alex"]
 111

### Cups!!

#### Remember the cups activity from the start of the day?

#### The word "A"

#### can be followed by

#### Any of these words

Girls' Programming Network

#### The word "A"

can be followed by

#### Any of these words

We can store the slips of paper as a python list!

['house', 'mouse', 'house',
'mouse', 'box', 'fox', 'box',
'fox', 'house', 'mouse']

#### So we get a Dictionary with a List value!

If you look up "A" you get back a list of all the words that can follow "a"

#### Cups $\rightarrow$ Dictionary with lists!

#### Here's what it looks like for a few more cups!

# You can get the whole cup dictionary from today's website!

# You now know all about lists and dictionaries!

# Let's put what we learnt into our project Try to do Part 6

### The tutors will be around to help!

Girls' Programming Network
