OSINT = Open Source Intelligence

When we think of Hacking we think of this:

But it really looks more like this:

OSINT = Open Source Intelligence

It's usually very hard to hack into software - but it's very easy to trick people into being insecure online!

What kind of information do you think a hacker can use that might be on a social media post?

Phishing Emails

A phishing email is when an attacker sends a normal looking email (usually pretending to be from a trusted source) and uses that to get you to click a link, download a file or give them your personal information

Phishing Emails

A phishing email is when an attacker sends a normal looking email (usually pretending to be from a trusted source) and uses that to get you to click a link, download a file or give them your personal information

How do you think we might be able to protect ourselves from phishing emails?

Phishing Emails

A phishing email is when an attacker sends a normal looking email (usually pretending to be from a trusted source) and uses that to get you to click a link, download a file or give them your personal information

How do you think we might be able to protect ourselves from phishing emails?

- Always check the email address that an email came from
- Never click a link or download anything if you're not 100% sure it's legitimate
- If you're not sure, go to the official website or call the company directly

Spy Mission - GPN Tutor what can you find out about them!!

They love cats, teaching, and cyber security. They also loves sharing things on social media. How many places can you find information on this mysterious GPN Tutor?

The Task – is to use your cyber security skills to find their username and password in a group of 4

How to – we have found some leaked documents that may help

1. Use their social media posts to figure out their username
2. Use a phishing email to get some possible passwords
3. Use their Password Hint to figure out which password is right!

Solution – Once you have determined their Username and Password then you can come up to the front and try and log in as them!
